

PROBLEM STATEMENT

How might we help Elsa streamline her swimsuit ordering process to minimize time spent on customer communications while ensuring accurate order capture?

KEY PERFORMANCE INDICATORS

- Measure the average time taken from order placement to confirmation.
- Survey customers after order completion to gauge their satisfaction with the ordering process.
- Measure the percentage of orders that are processed without errors (e.g., incorrect size, color, or style).

KEY LEARNINGS

- Understanding User Pain Points: The interviews revealed that customers often find it cumbersome to communicate their preferences, leading to misunderstandings and delays.
- Importance of Efficiency: Reducing the time spent on order communications can significantly increase Elsa's capacity to take on more orders without sacrificing quality.
- Value of Customer Feedback: Regularly measuring customer satisfaction can provide insights into how well the new system is performing and areas that may still need improvement.
