

PROJECT'S TIME-FRAME

DAY1: EMPATHY/USER RESEARCH

Objective: Understand Elsa's needs, her pain points, and her workflow.

- Tool: User Interviews (with Elsa and potentially a few customers)
- Time: 2 hours for interviews + 2 hours for analysis
- Outcome: Gather insights into the problems Elsa is facing, her workflow, and customer requests.

DAY1: DEFINE

Objective: Define the scope and focus of the solution based on user research.

- Tool: Persona
- Time: 1 hour
- Outcome: Identify the key problems Elsa's customers are facing that should be solved.

DAY2: PROBLEM STATEMENT

Objective: Clearly articulate the problem to ensure the solution addresses the real issue.

- Tool: Problem Statement Framework (How might we help...)
- Time: 2 hours
- Outcome: A problem statement like: "Elsa needs a system to efficiently gather customer information and manage orders without wasting time on repetitive tasks."

DAY2: IDEATION

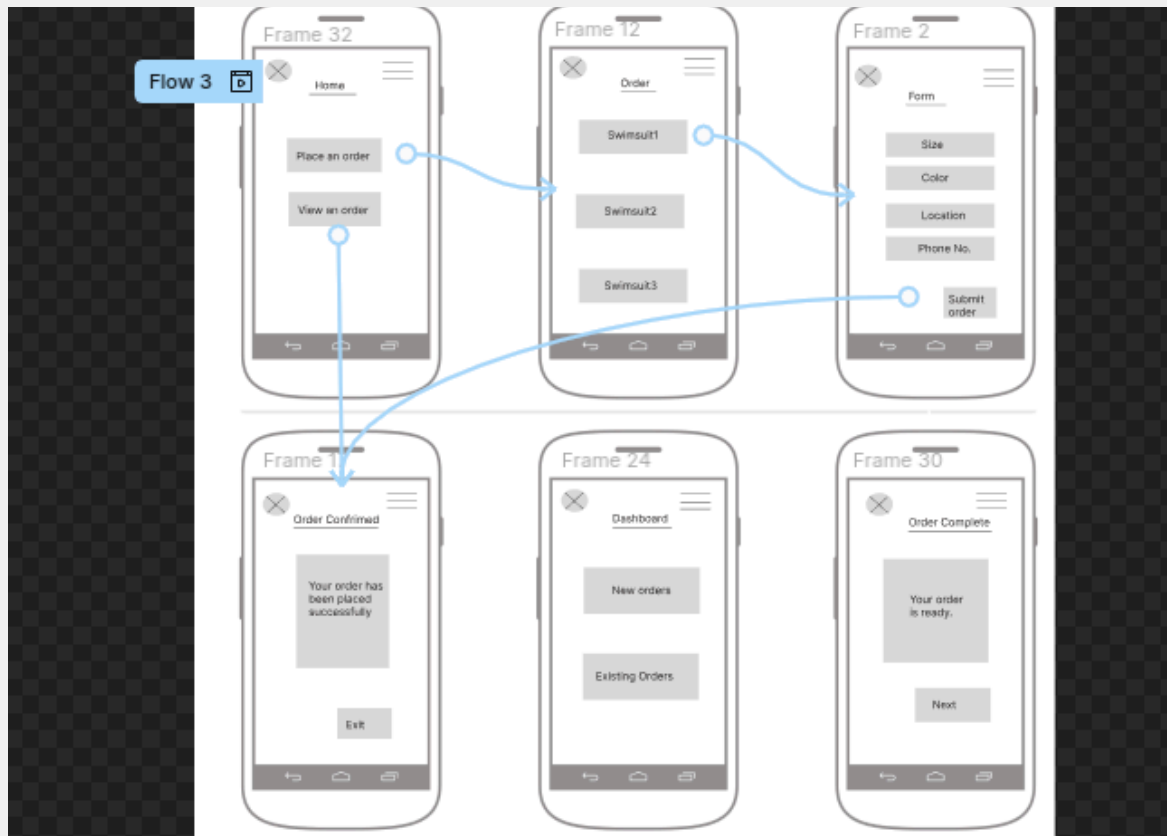

Objective: Brainstorm potential solutions that will address Elsa's needs.

- Tool: Brainwriting (write ideas on sticky notes)
- Time: 1 hour
- Tool: Prioritization Matrix (narrow down solutions to feasible ones)
- Time: 1 hour
- Outcome: A list of possible solutions such as an automated form or a simple order management system.

DAY3: PROTOTYPE

Objective: Brainstorm potential solutions that will address Elsa's needs.

- Objective: Create a low-fidelity mockup of the solution.
- Tool: Wireframing in Figma (basic layout of a form and order tracking system)
- Time: 3 hours
- Outcome: A clickable wireframe showing how Elsa could collect orders through a form and manage her time with a basic order dashboard.

DAY4: TEST

Objective: Validate the prototype with 5 participants.

- Tool: User Testing (have 5 participants walk through the wireframe)
- Time: 2 hours for testing + 2 hours for revisions
- Outcome: Feedback from participants to refine the design and identify necessary improvements.
